

RFD POLE REINSTATEMENT SYSTEM

Utility Asset Management (UAM)'s world class RFD Pole Reinstatement System™ has been specifically developed as a time-saving, cost-effective alternative to pole replacement.

Designed for easy installation in the most inaccessible of terrains, the RFD (Reinforced Design) system combines a patented 'Positive Bolted System' of ferrules and bolts, allowing the system to fully reinstate a pole for optimum strength, and sufficient exposure for natural drainage and future inspections.

Utility Asset Management (UAM) is one of Australia's leading providers of diversified services to utility and energy organisations, government departments, councils and major blue chip companies.

Established in 2000, UAM is known for its consistent provision of safe, high quality services.

MAXIMUM STRENGTH MINIMUM COST

Used throughout the world by leading utility and telecommunication industries, the RFD Pole Reinstatement System™ has passed the most demanding, stringent tests, and is a proven performer in terms of safety, effectiveness and cost efficiency.

Made from the highest quality galvanized steel, the RFD Pole Reinstatement System™ extends the life of damaged or substandard poles caused by accidental damage or ground-line deterioration. This unique system also offers you a select range of products for specific requirements and different pole loadings.

With UAM as your business partner, no pole reinforcement project is too big or too small, and no other company can provide our experience, quality products and full range of specialist services.

RFD STEEL FABRICATION

UAM's RFD product and service capabilities also include specialist steel fabrication services for wood, steel and concrete poles.

Ranging from CAD design, engineering, manufacturing and testing, to analysis and logistics management, UAM can provide a 'one-stop shop' solution to meet changing market demands, as well as manufacturing any ideas you need produced.

For added strength, we operate some of the country's largest hydraulic steel presses, and all are capable of pressing, stamping, drawing and forming a variety of the highest quality industrial steel products.

Our purchasing power and strong relationship with steel suppliers also results in major cost savings to clients.

The RFD Pole Reinstatement System™ was awarded the UK Energy Innovation Award 2015 in the category of "Best Electricity Network Improvement". This category recognises technologies or innovations that have been developed or lead by a contractor that improves electricity or gas networks or off shore assets.
